

Kenorland Commences 2025 Winter Drill Program at the Chebistuan Project, Quebec

Vancouver, British Columbia, February 18, 2025 – **Kenorland Minerals Ltd.** (TSXV: KLD) (OTCQX: KLDCF) (FSE: 3WQ0) (“**Kenorland**” or the “**Company**”) is pleased to announce the commencement of the Winter 2025 drill program at the Chebistuan Project (the “**Project**”), located in the northern Abitibi greenstone belt of Quebec, and held under an exploration agreement with Newmont Corporation (“**Newmont**”).

Q1 2025 Winter Exploration Program

The Winter 2025 exploration program and budget have been approved by Newmont, which will include up to 3,500m of drilling across 9 drill holes at the Deux Orignaux target area. This second phase of drilling, follow-up to the initial program completed in early 2023, will test lateral and down-dip extents of the mineralised syenite intersected in drill hole 23DODD005, which returned 157.20m at 0.41 g/t Au including 20.61m at 0.97 g/t Au (see press release dated June 27, 2023). The program will also test additional targets, identified as potential syenite plugs based on geophysical characteristics. Kenorland remains operator of the Project, and drilling activities are expected to conclude early March.

Figure 1. Plan map of Deux Orignaux drilling highlights (previously reported) and planned drill hole locations

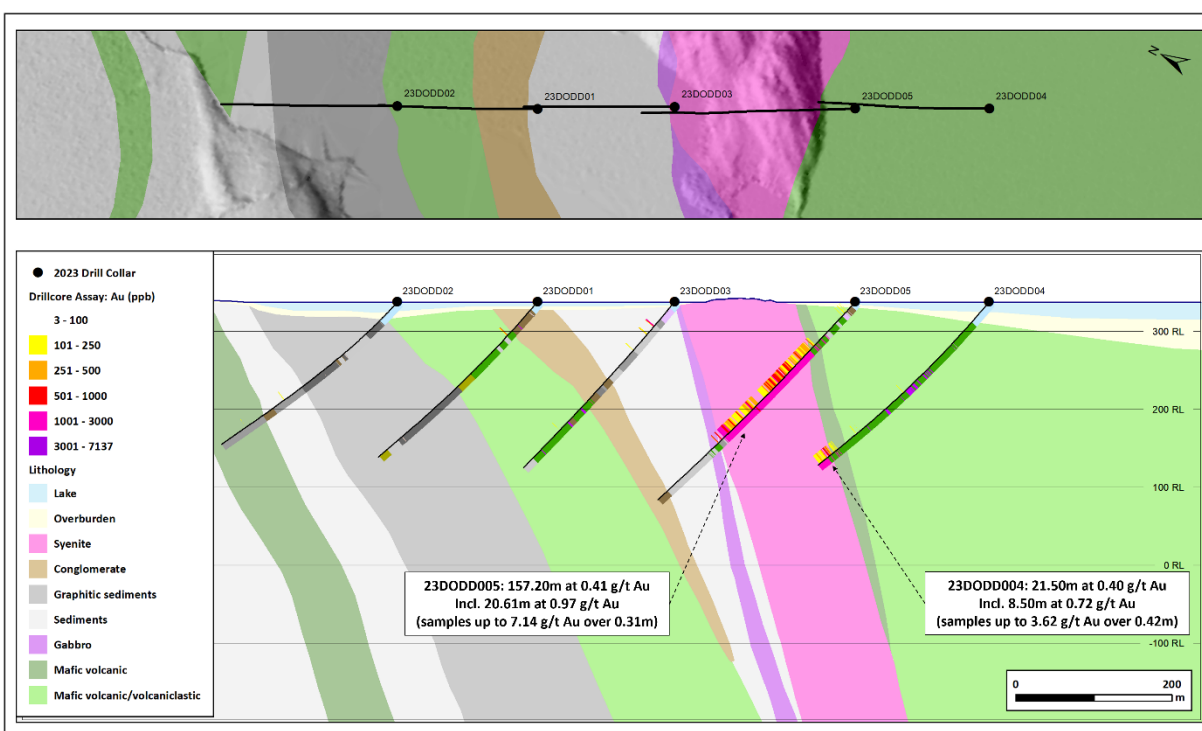

Deux Orignaux Target Area

The Deux Orignaux target area is a grassroots prospect under an earn-in agreement with Newmont. Systematic, property wide geochemical surveys completed in 2020 covering the original 159,690 hectare

project and detailed till geochemical surveys in 2021 defined the target area containing anomalous gold and multi-element geochemistry, and gold grains in glacial overburden. The defined target area was followed up with a detailed airborne magnetics survey, and an induced polarization (IP) survey in 2022 ahead of drill targeting.

The mineralised intrusion at Deux Orignaux, defined by coincident resistivity, chargeability, and magnetic anomalies, was intersected along the regional contact between a clastic sedimentary basin (Opemiska Group) and volcanic rocks, marked by a first order basin bounding structure and Timiskaming type polymictic conglomerates. The intrusion is mineralised throughout with minor disseminated pyrite and trace sphalerite associated with pervasive potassic and albite alteration (Kspar-albite-quartz-hematite-carbonate-sericite alteration assemblage).

About the Chebistuan Project

The Chebistuan Project was acquired by Kenorland through map staking in December 2019 and was optioned to Newmont in July 2020. Since completing property wide geochemical surveys in 2020 covering the original 159,690 hectare Project, land tenure has been reduced in size to encompass the Deux Orignaux prospect, regional targets and prospective structures. The property is located along a major east-west trending deformation zone which may represent the continuation of the Sunday Lake Deformation Zone; host to major gold deposits such as Detour Lake (Agnico Eagle Mines Limited) and Fenelon (Wallbridge Mining Company Limited). The Chibougamau and Chapais mining camps, which have produced over 6.5Moz of gold and 1.6 billion pounds of copper historically, are located directly to the east of the Chebistuan property. The Project is largely covered with glacial till and is accessed through a network of logging roads and by helicopter.

Figure 3. Chebistuan Project location

The Project is under an exploration agreement dated July 17, 2020 (the “**Exploration Agreement**”) with a venture option (the “**Joint Venture**”) with Newmont. The Exploration Agreement is currently in the Phase 2 stage since Newmont has completed all requirements to earn a 51% interest in the Project within the initial phase of the Exploration Agreement. Within the Phase 1 earn-in stage, approximately 6,250 B-horizon soils (glacial till substrate) and 190 HMC till samples were collected property wide, which led to high resolution geophysical surveys and an initial drill test at the Deux Orignaux target completed between 2020-2023. Newmont currently has the option to earn an additional 29% interest for a cumulative 80% interest (the “**Phase Two Earn-in**”) in the Project over six years by defining a 1.5Moz Au resource through a pre-feasibility stage study in line with NI 43-101 Standards of Disclosure for Mineral Projects, as well as making certain cash payments to Kenorland. The parties may continue to explore and develop the property through an 80% Newmont, 20% Kenorland Joint Venture or, in the case of a construction decision, Kenorland can elect for Newmont to finance its portion of mine development cost. If Newmont elects not to continue with the Phase Two Earn-in, ownership interest in the Project can switch to 51% Kenorland and 49% Newmont.

Qualified Person

Cédric Mayer, M.Sc., P.Geo. (OGQ #02385), “Qualified Person” under National Instrument 43-101, has reviewed and approved the scientific and technical information in this press release.

About Kenorland Minerals

Kenorland Minerals Ltd. (TSXV: KLD) is a well-financed mineral exploration company focused on project generation and early-stage exploration in North America. Kenorland’s exploration strategy is to advance greenfields projects through systematic, property-wide, phased exploration surveys financed primarily through exploration partnerships including option to joint venture agreements. Kenorland holds a 4% net

smelter return royalty on the Frotet Project in Quebec which is owned by Sumitomo Metal Mining Canada Ltd. The Frotet Project hosts the Regnault gold system, a greenfields discovery made by Kenorland and Sumitomo Metal Mining Canada Ltd. in 2020. Kenorland is based in Vancouver, British Columbia, Canada.

Cautionary Statement Regarding Forward Looking Statements

This news release contains forward-looking statements and forward-looking information (together, "forward-looking statements") within the meaning of applicable securities laws. All statements, other than statements of historical facts, are forward-looking statements. Generally, forward-looking statements can be identified by the use of terminology such as "plans", "expects", "estimates", "intends", "anticipates", "believes" or variations of such words, or statements that certain actions, events or results "may", "could", "would", "might", "will be taken", "occur" or "be achieved". Forward looking statements involve risks, uncertainties and other factors disclosed under the heading "Risk Factors" and elsewhere in the Company's filings with Canadian securities regulators, that could cause actual results, performance, prospects and opportunities to differ materially from those expressed or implied by such forward-looking statements. Although the Company believes that the assumptions and factors used in preparing these forward-looking statements are reasonable based upon the information currently available to management as of the date hereof, actual results and developments may differ materially from those contemplated by these statements. Readers are therefore cautioned not to place undue reliance on these statements, which only apply as of the date of this news release, and no assurance can be given that such events will occur in the disclosed times frames or at all. Except where required by applicable law, the Company disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
